This statement is false

Project Nr. 2023-2-TR01-KA220-ADU-000174188

Correct answer:

Ocean absorbs heat

- Earth grows warmer, change of weather and temperature due to changing currents (correct)
- cooler temperature in the air (false)

Coastal regions

- Climate change will cause more flooding (correct)
- more buildings and living in coastal regions (false)

Coral reefs

- Coral bleaching occurs and coral reefs are dying due to warmer ocean temperature (correct)
- Enhanced growth of coral reefs due to warmer ocean temperature (false)

Ocean absorbs greenhouse gases to clean the air

- Oceans become acidic and poisonous thereby changing the ecosystem, causing animals in the water to die (correct)
- Cleaner air and water (false)

Fish in the water

- Fish are wandering towards the northern regions due to its colder water as their usual territories grow too warm for them (correct)
- Fish enjoy the warmer temperatures and the fish population grows (false)

Fishing in the ocean

- Overfishing is one of the main reasons for the declining fish population around the world (correct)
- Fish are taken into aquariums to heal and recover (false)

Drinking water sources drying out on land

- Competition/demand for water rises around the world (correct) /
- Artificial water development (false)

Warm air takes in more water

- More humid and unbearable heat (correct)
- Nice spring temperatures (false)

Warm air cools down (due to taking in more water)

- More rain and thunderstorms (correct)
- More snow and better snow sports opportunities (false)

Less cloud coverage

- More sun/heat on land, land dries out, dying of crops and plants (correct)
- Nicer beach weather and sun tanning, more usage of sun cream (false)
